

Featuring  SyncLink™ Technology

VERSID ASSURE™ WIRELESS REMOTE MONITORING SOLUTIONS

TEMPERATURE MONITORING | VALIDATED ALERTS | CUSTOMIZABLE REPORTING | CONDITION-BASED MAINTENANCE

Versid Assure™ Wireless Remote Monitoring Solutions synthesize state-of-the-art monitoring technologies with real-time reporting, alarms, and customizable alerts to help organizations manage mission-critical systems. Secure cloud-based reporting features keep designated leadership aware of time-sensitive performance metrics—and in control of managing defined parameters. Customizable controls allow designated users to set data collection frequencies and alert preferences, such as text messages or email.

The Versid Assure™ solution empowers managers to evaluate system performance and proactively address maintenance needs and life cycle predictions. Most importantly, real-time Versid Assure™ monitoring systems enable users to make timely interventions, solving problems before they start.

THE MOST INTELLIGENT PROGRAMMING ON THE MARKET

Versid Assure™ features exclusive intelligence not available in any other commercial monitoring solution today. Product simulation algorithms zero in on product temperatures based on physical properties of your inventory and your own real-time data. Simulation meets ASHRAE test requirements and provides reporting and trend analysis. Intelligent ambient temperature analysis goes beyond the standard set point to analyze how an out-of-range reading occurs.

ELIMINATE FALSE ALERTS

Why tolerate annoying alerts about routine variations that occur during a defrost cycle or a routine delivery? Versid Assure™ algorithms determine significance of data collected from your operation. You can rely on every alert from Versid Assure™ to be both meaningful and actionable.

Versid Assure™ meets national and international security standards including NIST, ISO 27001, and US-EU Safe Harbor.

MONITORING CAPABILITIES

- Temperature:
 - Equipment
 - Ambient
 - Product
- Humidity
- Water
- Energy
- Motion
- Pressure

REPORTING CAPABILITIES

- Secure, cloud-based access, 24/7
- Fully customizable configuration
- Trends analysis
- Mobile access
- Intelligent data analysis:
 - No unnecessary alerts
 - No unnecessary warnings
- Product status and forecast

SOLUTIONS

- Product simulation
- Food quality
- Conditions-based maintenance
- Energy management
- Bacteria growth modeling
- Activity/motion
- Risk management
- Equipment life cycle
- Fault detection
- Standards compliance
